

### **Amendments to the Specification**

Please replace the first paragraph on page 12 of the specification with the following amended paragraph:

Referring to the drawings and initially to **FIG. 1** there is shown an exploded perspective view of a rifle barrel according to the prior art and comprising what is commonly referred to in the art as a "battle sight" **23**, which battle sight is generally attached to a rear battle sight mount **17** by means of a roll pin **15**, which is used to firmly secure the battle sight to the rifle. The battle sight **23** can be pivoted about the axis of the roll pin **15** from a horizontal, resting position to a vertical position. It is when the battle sight **23** is placed in its ~~horizontal~~ vertical position that it is ready for use, as is well-known in the art.
